

**CIUDAD DE HUNTINGTON PARK  
INFORME DE CONFIANZA DE CONSUMIDOR de 2007**

Desde 1991, las agencias proveedoras de recursos hidráulicos de California han emitido información sobre el agua que se provee al consumidor. Este informe es una copia del informe sobre la calidad del agua potable que le proveímos el año pasado. Incluimos detalles sobre el origen del agua que toma, cómo se analiza, qué contiene, y cómo se compara con los límites estatales y federales. Nos esforzamos por mantenerle informado sobre la calidad de su agua, y proveerle un abastecimiento confiable y económico que cumpla con todos los requisitos.

**¿De Dónde Proviene el Agua que Tomo?**

Su agua de la llave proviene de 2 fuentes: de las aguas naturales (subterránea) y de aguas superficiales (de los ríos). Bombreamos aguas naturales de profundos pozos locales. También usamos agua superficial de la agencia Metropolitan Water District del Sur de California (MWD) importada del Río Colorado y del proyecto State Water Project del Norte de California. Estas dos fuentes de agua nos abastecen en las áreas de servicio que se muestran en el mapa adjunto. Este reporte informa sobre la calidad de nuestra agua subterránea y el abastecimiento del agua superficial del MWD.

**¿Cómo Se Analiza Mi Agua Potable?**

El agua que toma se analiza regularmente para asegurarnos de que no halla niveles altos de sustancias químicas, de radioactividad o de bacteria en el sistema de distribución y en las tomas de servicios. Estos análisis se llevan a cabo semanal, mensual, trimestral, y anualmente o con más frecuencia, dependiendo de la sustancia analizada. Bajo las leyes estatales y federales, se nos permite analizar algunas sustancias menos frecuentemente que los períodos anuales porque los resultados no cambian.

**¿Cuáles Son Los Estándares del Agua Potable?**

La Agencia federal de Protección al Medio Ambiente (USEPA) impone los límites de las cantidades de ciertos contaminantes en el agua potable. En California, el Ministerio de Asuntos Exteriores de la Salud Pública (Departamento) regula la calidad de agua del grifo haciendo cumplir límites que son al menos tan rigurosos como el USEPA's. Históricamente, los estándares de California han sido más estrictos que los federales.

Hay dos tipos de límites conocidos como estándares. Los estándares primarios lo protegen de sustancias que potencialmente podrían afectar su salud. Las normas establecen los Niveles Contaminantes Máximos (MCL, en inglés) que se permite del contaminante primario o secundario en el agua de beber. Los abastecedores de agua deben asegurarse de que la calidad de esta cumpla con los Niveles Contaminantes Máximos (o MCLs, en inglés). No todas las sustancias tienen un Nivel Contaminante Máximo. El plomo y el cobre, por ejemplo, son regulados, por cierto nivel de acción. Si cualquier sustancia química sobrepasa el nivel de acción, se dará la necesidad de un proceso de tratamiento para rebajar los niveles en el agua de beber. Los abastecedores de agua deben cumplir con los Niveles Contaminantes Máximos para asegurar la calidad del agua.

Las Metas para la Salud Pública (MSP [o PHGs, en inglés]) son establecidas por la agencia estatal de California-EPA. Las PHGs proveen más información con respecto a la calidad del agua, y son similares a los reglamentos federales nombrados Metas para Los Niveles de Contaminante Máximo (MNCM [o MCLGs, en inglés]). Las PHGs y MCLGs son metas a nivel recomendable. Las PHG y MCLG son ambas definidas como los niveles de contaminantes en el agua potable por debajo de los niveles donde no se esperan riesgos a la salud y no enforzables. Ambos niveles PHG y MCLG son concentraciones de una sustancia en las que no hay riesgos a la salud aún conocidos.

**¿Cómo Interpreto Mi Informe de Calidad del Agua?**

Aunque analizamos más de 100 sustancias, las normas nos requieren que reportemos solo aquellas que se encuentran en el agua. La primera columna en la tabla de la calidad de agua muestra la lista de las sustancias detectadas en el agua. La siguiente columna muestra la lista de la concentración promedio y el rango de concentraciones que se hallan encontrado en el agua que usted toma. En seguida están las listas de el MCL, el PHG y el MCLG, si estos son apropiados. La última columna describe las probables fuentes u origen de las sustancias detectadas en el agua potable.

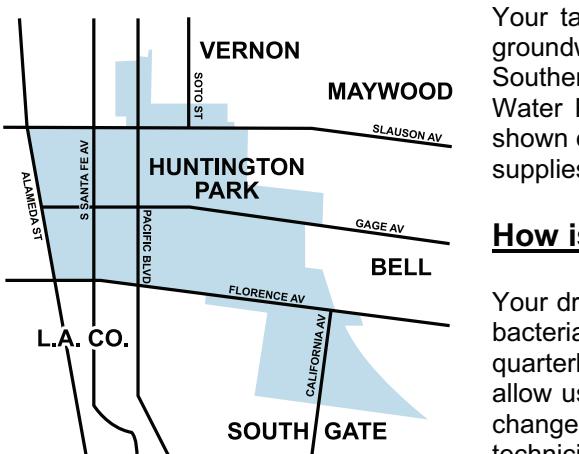

Para revisar la calidad de su agua de beber, compare los valores por encima del promedio, mínimos y máximos y el Nivel Contaminante Máximo. Revise todos los químicos que se encuentran por encima del Nivel Contaminante Máximo. Si los químicos sobrepasan el Nivel Contaminante Máximo no significa que sea detrimental a la salud de inmediato. Más bien, se requiere que se realicen análisis más frecuentemente en el abastecimiento del agua por un corto período. Si los resultados muestran sobrepasar el MCL, el agua debe ser tratada para remover esa sustancia, o el abastecimiento de esta debe decomisionarse.

**CITY OF HUNTINGTON PARK 2007 CONSUMER CONFIDENCE REPORT**

**CITY OF HUNTINGTON PARK  
2007 CONSUMER CONFIDENCE REPORT**

Since 1991, California water utilities have been providing information on water served to its consumers. This report is a snapshot of the tap water quality that we provided last year. Included are details about where your water comes from, how it is tested, what is in it, and how it compares with state and federal limits. We strive to keep you informed about the quality of your water, and to provide a reliable and economic supply that meets all regulatory requirements.

**Where Does My Tap Water Come From?**

Your tap water comes from 2 sources: groundwater and surface water. We pump groundwater from local, deep wells. We also use Metropolitan Water District of Southern California's (MWD) surface water from both the Colorado River and the State Water Project in northern California. These water sources supply our service area shown on the adjacent map. The quality of our groundwater and MWD's surface water supplies is presented in this report.

**How is My Drinking Water Tested?**

Your drinking water is tested regularly for unsafe levels of chemicals, radioactivity and bacteria at the source and in the distribution system. We test weekly, monthly, quarterly, annually or less often depending on the substance. State and federal laws allow us to test some substances less than once per year because their levels do not change frequently. All water quality tests are conducted by specially trained technicians in state-certified laboratories.

**What Are Drinking Water Standards?**

The U.S Environmental Protection Agency (USEPA) limits the amount of certain substances allowed in tap water. In California, the State Department of Public Health (Department) regulates tap water quality by enforcing limits that are at least as stringent as the USEPA's. Historically, California limits are more stringent than the Federal ones.

There are two types of these limits, known as standards. Primary standards protect you from substances that could potentially affect your health. Secondary standards regulate substances that affect the aesthetic qualities of water. Regulations set a Maximum Contaminant Level (MCL) for each of the primary and secondary standards. The MCL is the highest level of a substance that is allowed in your drinking water.

Public Health Goals (PHGs) are set by the California Environmental Protection Agency. PHGs provide more information on the quality of drinking water to customers, and are similar to their federal counterparts, Maximum Contaminant Level Goals (MCLGs). PHGs and MCLGs are advisory levels that are nonenforceable. Both PHGs and MCLGs are concentrations of a substance below which there are no known or expected health risks.

**How Do I Read the Water Quality Table?**

Although we test for over 100 substances, regulations require us to report only those found in your water. The first column of the water quality table lists substances detected in your water. The next columns list the average concentration and range of concentrations found in your drinking water. Following are columns that list the MCL and PHG or MCLG, if appropriate. The last column describes the likely sources of these substances in drinking water.

To review the quality of your drinking water, compare the highest concentration and the MCL. Check for substances greater than the MCL. Exceedence of a primary MCL does not usually constitute an immediate health threat. Rather, it requires testing the source water more frequently for a short duration. If test results show that the water continues to exceed the MCL, the water must be treated to remove the substance, or the source must be removed from service.

**Why Do I See So Much Coverage in the News About the Quality Of Tap Water?**

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- Microbial contaminants, including viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife;
- Inorganic contaminants, such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming;
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses;
- Organic chemical contaminants, including synthetic and volatile organic chemicals, that are byproducts of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, agricultural application, and septic systems;
- Radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, the USEPA and the Department prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. Department regulations also establish limits for contaminants in bottled water that must provide the same protection for public health.

All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the USEPA's Safe Drinking Water Hotline (1-800-426-4791). You can also get more information on tap water by logging on to these helpful web sites:

- [www.epa.gov/OGWDW](http://www.epa.gov/OGWDW) (USEPA's web site)
- [www.cdpb.ca.gov](http://www.cdpb.ca.gov) (CDPB – Department web site)

### Should I Take Additional Precautions?

Some people may be more vulnerable to contaminants in drinking water than the general population. Immunocompromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. The USEPA/Centers for Disease Control guidelines on appropriate means to lessen the risk of infection of *Cryptosporidium* and other microbial contaminants are available from the USEPA's Safe Drinking Water Hotline (1-800-426-4791).

### Source Water Assessment

MWD completed an assessment of its Colorado River and State Water Project supplies in 2002. Colorado River supplies are considered most vulnerable to recreation, urban/storm water runoff, increasing urbanization in the watershed, and wastewater. State Water Project supplies are considered most vulnerable to urban/storm water runoff, wildlife, agriculture, recreation and wastewater. A copy of the assessment can be obtained by contacting MWD at (213) 217-6850.

The City of Huntington Park conducted an assessment of its groundwater supplies in 2004. Groundwater supplies are considered most vulnerable to sewer collection systems, automobile gas stations, and contractor or government agency equipment storage yards. A copy of the approved assessment may be obtained by mailing a request to the City of Huntington Park, 6550 Miles Avenue, Huntington Park, CA 90255 attention Gene Viramontes.

### How Can I Participate in Decisions On Water Issues That Affect Me?

The public is welcome to attend City Council meetings the first and third Monday of each month at 6:30 p.m. at 6550 Miles Ave.

### How Do I Contact My Water Agency If I Have Any Questions About Water Quality?

If you have specific questions about your tap water quality, please contact Gene Viramontes at (323) 584-6274.

### Some Helpful Water Conservation Tips

- Fix leaky faucets in your home – save up to 20 gallons every day for every leak stopped
- Adjust your sprinklers so that water lands on your lawn/garden, not the sidewalk/driveway – save 500 gallons per month

## **CITY OF HUNTINGTON PARK 2007 CONSUMER CONFIDENCE REPORT**

Results are from the most recent testing performed in accordance with state and federal drinking water regulations

### **PRIMARY STANDARDS MONITORED AT THE SOURCE-MANDATED FOR PUBLIC HEALTH**

ORGANIC CHEMICALS (µg/l)	GROUNDWATER AVERAGE	GROUNDWATER RANGE	MWD'S SURFACE WATER AVERAGE	MWD'S SURFACE WATER RANGE	PRIMARY MCL	MCLG or PHG	MAJOR SOURCES IN DRINKING WATER
Trichloroethylene (TCE)	0.95	ND-5.1	ND	ND	5	0.8 (a)	Discharge from metal degreasing sites and other factories

INORGANICS	Sampled from 2005 to 2007 (b)						
	AVERAGE	RANGE	PRIMARY MCL	MCLG or PHG	MAJOR SOURCES IN DRINKING WATER		
Aluminum (µg/l)	0.07	ND-0.12	0.08	ND-0.14	1	0.6 (a)	Erosion of natural deposits; residue from surface water treatment processes
Arsenic (µg/l)	1.1	ND-3.8	ND	ND-2.8	50	0.004 (a)	Erosion of natural deposits; glass/electronics production wastes; runoff
Barium (µg/l)	0.111	0.08-0.15	ND	ND-0.13	1	2 (a)	Oil drilling waste and metal refinery discharge; erosion of natural deposits
Fluoride (mg/l)	0.43	0.39-0.46	0.17	0.1-0.2	2.0	1 (a)	Erosion of natural deposits, water additive that promotes strong teeth
Nitrate (mg/l as NO <sub>3</sub> )	2.1	0.15-6.4	0.53	ND-1.1	45	45 (a)	Runoff and leaching from fertilizer use/septic tanks/sewage, natural erosion

RADIOLOGICAL - (pCi/l) Analyzed 4 consecutive quarters every 4 years (results are from 2004 to 2007) (b)							
	AVERAGE	RANGE	PRIMARY MCL	MCLG or PHG	MAJOR SOURCES IN DRINKING WATER		
Gross Alpha (d)	3.88	ND-10.2	ND	ND-7.2	15 (e)	0	Erosion of natural deposits
Gross Beta	NA	NA	ND	ND-6.4	50 (e)	0	Decay of natural and man-made deposits
Radium 228	0.08	ND-0.53	ND	ND	5	-	Erosion of natural deposits
Uranium	3.6	ND-6.7	0.46	ND-1.9	20 (e)	0.5 (a)	Erosion of natural deposits

### **PRIMARY STANDARDS MONITORED IN THE DISTRIBUTION SYSTEM - MANDATED FOR PUBLIC HEALTH**

MICROBIALS	DISTRIBUTION SYSTEM AVERAGE % POSITIVE	DISTRIBUTION SYSTEM RANGE OF % POSITIVE	PRIMARY MCL	MCLG or PHG
Total Coliform Bacteria	0%	0%	5%	0% Naturally present in the environment
Fecal Coliform and E.Coli Bacteria	0%	0%	0%	0% Human and animal fecal waste
No. of Acute Violations	0	0	-	-

DISINFECTION BY-PRODUCTS (f)	DISTRIBUTION SYSTEM AVERAGE	DISTRIBUTION SYSTEM RANGE	PRIMARY MCL	MCLG or PHG
Trihalomethanes-TTHMs (µg/l)	35.5	2.8-72.9	80	- By-product of drinking water chlorination
Halogenated Acids (µg/l)	14.4	ND-29.4	60	- By-product of drinking water disinfection

AT THE TAP PHYSICAL CONSTITUENTS	DISTRIBUTION SYSTEM 90%ile	DISTRIBUTION SYSTEM # OF SITES ABOVE THE AL	PRIMARY MCL	MCLG or PHG
30 sites sampled in 2007				
Copper (µg/l)	0.073 (i)	0	1.3 AL	0.17 (a) Internal corrosion of household plumbing, erosion of natural deposits
Lead (µg/l)	ND(i)	0	15 AL	2 (a) Internal corrosion of household plumbing, industrial manufacturer discharges

### **SECONDARY STANDARDS MONITORED AT THE SOURCE-FOR AESTHETIC PURPOSES**

GENERAL PHYSICAL CONSTITUENTS	DISTRIBUTION SYSTEM AVERAGE	DISTRIBUTION SYSTEM RANGE	SECONDARY MCL	MCLG or PHG
30 sites sampled in 2007				
Aggressiveness Index (corrosivity)	12.0	12	0.18	0.02-0.30 Non-corrosive
Aluminum (µg/l) (j)	ND	ND-120	76	ND-140 200 600 (a) Erosion of natural deposits, surface water treatment process residue
Chloride (mg/l)	43.8	24-77	78.3	40-101 500 Runoff/leaching from natural deposits, seawater influence
Color (color units)	1.67	ND-10	2	1.0-2.0 15 Naturally-occurring organic materials
Conductivity (µmhos/cm)	678	600-870	676	414-893 1,600 Substances that form ions when in water, seawater influence
Iron (ug/l)	24	ND-130	ND	300 Leaching from natural deposits
Manganese (µg/l)	21.83	ND-48	ND	50 Leaching from natural deposits
Odor (threshold odor number)	ND	ND	1.67	1.0-2.0 3 Naturally-occurring organic materials
Sulfate (mg/l)	88.6	75-110	116.7	46-179 500 Runoff/leaching from natural deposits, industrial wastes
Total Dissolved Solids (mg/l)	382	300-500	391	248-519 1,000 Runoff/leaching from natural deposits
Turbidity (NTU)	0.55	ND-1.7	0.05	0.04-0.07 5 Soil runoff

### **SECONDARY STANDARDS MONITORED IN THE DISTRIBUTION SYSTEM-FOR AESTHETIC PURPOSES**

GENERAL PHYSICAL CONSTITUENTS	DISTRIBUTION SYSTEM AVERAGE	DISTRIBUTION SYSTEM RANGE	SECONDARY MCL	MCLG or PHG
Color (color units)	0.4	<3-3	15	- Naturally-occurring organic materials
Odor (threshold odor number)	1	1	3	- Naturally-occurring organic materials

### **ADDITIONAL CHEMICALS OF INTEREST**

ADDITIONAL CHEMICALS OF INTEREST	DISTRIBUTION SYSTEM AVERAGE	DISTRIBUTION SYSTEM RANGE	SECONDARY MCL	MCLG or PHG
Sampled from 2005 to 2007 (b)				
Aggressiveness Index (corrosivity)	12.0	12	0.18	0.02-0.30 Non-corrosive
Boron (µg/l)	NA	NA	157	76-103
Bromate (µg/l)	NA	NA	6	34-10
Calcium (mg/l)	67	59-86	37	23-55
Magnesium (mg/l)	15.6	13-22	17.3	11.0-23.0
N-Nitrosodimethylamine (ng/l)	NA	NA	NA	ND-8.2
Perchlorate (ug/l)	ND	ND	ND	ND
pH (standard unit)	7.8	7.7-7.9	8.2	8.2-8.3
Potassium (mg/l)	3.4	3.1-3.8	3.4	2.7-3.9
Sodium (mg/l)	45	41-49	71	50-83
Total Hardness (mg/l)	230	200-300	164	112-201
